

ADDITIONAL RADFET PRODUCTS

Varadis 100nm & 1 μ m RADFET

- Instant & direct, non-destructive reading of radiation dose
- Zero or very low power consumption
- Large dynamic range
- Smallest active volume of all dosimeters
- Easily integrated into an automated system

In addition to the VT01 and VT02 Varadis 400nm RADFETs, we have a range of other products that we would be delighted to discuss.

These include:

- **100nm RADFET:** suitable for the highest doses, up to 10 kGy and even beyond
- **1 μ m RADFET:** suitable for lower dose range, approaching 1 mGy

The exact dose ranges will depend on customer's application requirements and the design of readout circuitry; approximate dose ranges are shown in the figure above.

Please email us on sales@varadis.com for more information on our world leading RADFET technologies
